

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-2. (Canceled)

3. (Currently Amended) A method of managing a phone call to a wireless handheld phone device of a personal digital assistant, wherein the phone call is transmitted from a device in a mobile phone network, the method comprising:

determining a status of a radio switch of the personal digital assistant;

determining a status of a network coverage of the wireless handheld phone device of the personal digital assistant;

determining a status of an earplug device with respect to the personal digital assistant;

and

managing a incoming phone call to the wireless handheld phone device, wherein managing the incoming phone call is based on the status of the radio switch, and the status of the network coverage, wherein the managing of the phone call to the wireless handheld phone device further comprises receiving the phone call only if an earplug device is plugged in; the managing further comprising:

receiving the incoming phone call only when the earplug device is plugged in; determined to have a first status;

alerting a user to the phone call; and

diverting the incoming phone call, by the personal digital assistant, to a voicemail application when the earplug device is determined to have a status other than the first status

silencing a ringer and sending the phone call to a voicemail application when the user performs an action to initiate a silence routine after being alerted to the phone call, wherein:

the earplug device is configured to be electrically connected to the wireless handheld phone device, and

the earplug device is plugged in if the earplug device is electrically connected to the personal digital assistant and is configured to emit sound waves related to signals received from the personal digital assistant.

4-6. (Canceled)

7. (Currently Amended) The method of Claim 3, further comprising: receiving a voicemail notification from the mobile phone network; and displaying a presenting a voicemail notification message.

8. (Currently Amended) The method of Claim 3, further comprising: receiving caller data of the incoming phone call, wherein the caller data includes information on a phone number associated with the incoming phone call, and information on a name associated with the incoming phone number; and displaying an incoming message, wherein the incoming message includes information related to the caller data.

9. (Previously Presented) The method of Claim 8, wherein the information on the phone number is identifiable or unidentifiable, and wherein the information on the name is identifiable or unidentifiable.

10-11. (Canceled)

12. (Currently Amended) The method of Claim 3, further comprising:
suspending a current application other than a call device, wherein the call device is
configured to be active if the incoming phone call is being answered; and
initiating the call device.

13. (Currently Amended) A personal digital assistant including a wireless handheld phone
device, the wireless handheld phone device comprising:
a receiver configured to receive a phone call transmitted from a device in a mobile phone
network;
~~a radio switch detector configured to determine a status of a radio switch of the personal
digital assistant;~~
~~a network coverage detector configured to determine a status of a network coverage of
the wireless handheld phone device in the mobile phone network; and~~
~~an earplug device-detector status determiner configured to determine if an earplug device
is electrically connected a status of an earplug device with respect to the personal digital
assistant, wherein:~~
the receiver is configured to receive the phone call only when the earplug device ~~detector
status determiner~~ determines that the earplug device ~~is electrically connected to the personal
digital assistant has a first status,~~
~~when the earplug device detector determines that the earplug is electrically connected to
the personal digital assistant, the wireless handheld phone device is further configured to:~~
~~alert a user to the phone call; and~~

when the earplug device status determiner determines that the earplug device has a status other than the first status with respect to the personal digital assistant, the personal digital assistant is further configured to divert the phone call to a voicemail application

silence a ringer and send the phone call to a voicemail application when the user performs an action to initiate a silence routine after being alerted to the phone call.

14. (Canceled)

15. (Original) The personal digital assistant of Claim 13, further comprising:
a display device; and
a tap recognizer connected to the display device, wherein the tap recognizer is configured to initiate a voicemail application.

16. (Original) The personal digital assistant of Claim 13, further comprising:
a display device; and
a tap recognizer connected to the display device, wherein the tap recognizer is configured to answer the phone call and to initiate a call application.

17. (Currently Amended) A computer-readable medium carrying one or more sequences of one or more instructions for managing [[a]] an incoming phone call to a wireless handheld phone device of a personal digital assistant, the one or more sequences of one or more instructions including instructions which, when executed by one or more processors of the personal digital assistant, cause the one or more processors to perform:
determining a status of a radio switch of the personal digital assistant; and
determining a status of a network coverage of the wireless handheld phone device of

the personal digital assistant; and

determining a status of an earplug device with respect to the personal digital assistant;
wherein the earplug device is configured to be electrically connected to the wireless handheld
phone device;

receiving the incoming phone call only when the earplug device is determined to be
plugged in; have a first status; and

diverting the incoming phone call, by the personal digital assistant, when the earplug
device is determined to have a status other than the first status

alerting a user to the phone call, and

silencing a ringer and sending the phone call to a voicemail application when the
user performs an action to initiate a silence routine after being alerted to the phone call,
-wherein:

if the earplug device is plugged in, the earplug device is electrically connected to the
personal digital assistant and is configured to emit sound waves related to signals received from
the wireless handheld phone device of the personal digital assistant, and

the wireless handheld device is capable of receiving the phone call only when the status
of the earplug device is determined to be electrically connected to the wireless handheld phone
device.

18. (Currently Amended) The computer-readable medium as recited in Claim 17, further
comprising:

determining a status of a radio switch of the personal digital assistant; and

determining a status of a network coverage of the wireless handheld phone device of the
personal digital assistant, wherein

if the radio switch is on, the wireless handheld phone device is capable of receiving the

phone call, and wherein if the network coverage is adequate, the signal strength of the phone call is sufficient for the wireless handheld phone device to maintain a connection with the mobile phone network.

19-20. (Canceled)

21. (Currently Amended) The computer-readable medium as recited in Claim 17, wherein the instructions further cause the processor to carry out:

receiving a voicemail notification from the mobile phone network; and
displaying presenting a voicemail notification message.

22. (Currently Amended) The computer-readable medium as recited in Claim 17, wherein the instructions further cause the processor to carry out:

receiving caller data of the phone call, wherein the caller data includes information on a phone number associated with the incoming phone call, and information on a name associated with the phone number; and

displaying presenting an incoming message, wherein the incoming message includes information related to the caller data.

23. (Previously Presented) The computer-readable medium as recited in Claim 22, wherein the information on the phone number is identifiable or unidentifiable, and wherein the information on the name is identifiable or unidentifiable.

24-25. (Canceled)

26. (Previously Presented) The computer-readable medium as recited in Claim 17, wherein the instructions further cause the processor to carry out:

suspending a current application other than a call device, wherein the call device is configured to be active if the phone call is being answered; and

initiating the call device.

27. (New) The method of claim 3, further comprising:

silencing a ringer of the wireless handheld phone device and sending the incoming phone call to the voicemail application when the user performs an action to initiate a silence routine after being alerted to the incoming phone call.

28. (New) The method of claim 3, further comprising:

determining a status of a radio switch of the personal digital assistant; and

determining a status of a network coverage of the wireless handheld phone device of the personal digital assistant, wherein

the managing of the incoming phone call to the wireless handheld phoned device is further based on the status of the radio switch and the status of the network coverage.
